Subject Index of Volume 144

Adhesion
tribological studies on adhesion phenomena between wheel and rail at high speeds, 263

Baltimore Metro
investigation of rail corrugations on the Baltimore Metro, 197

Contact fatigue
metallurgical improvement of rail for the reduction of rail–wheel contact fatigue failures, 319
Contact region fatigue
contact region fatigue of railway wheels under combined mechanical rolling pressure and thermal brake loading, 57
Corrugated rail treads
surface analysis of corrugated rail treads, 153
Corrugation wear
wheelset–track resonance as a possible source of corrugation wear, 211
Corrugations
effects of vibration system and rolling conditions on the development of corrugations, 227
Crack growth
shear mode crack growth and rolling contact fatigue, 307

Design methodology
design methodology for wheel and rail profiles for use on steered railway vehicles, 329

Edge effects
analysis of edge effects on rail–wheel contact, 39

Fatigue cracks
early detection of rolling–sliding contact fatigue cracks, 103
Fatigue life
effect of metal removal, steel cleanliness and wheel load on the fatigue life of rail, 71
Fatigue threshold
finite element and fatigue threshold study of shelling in heavy haul rails, 289
Finite element
finite element and fatigue threshold study of shelling in heavy haul rails, 289

Grinding
design of rail head profile with full use of grinding, 363

Head-hardened rails
investigation of rolling contact fatigue in a head-hardened rail, 89
High axle loads
rolling contact fatigue in railway wheels under high axle loads, 139

Kinematic hardening
effects of non-linear kinematic hardening on plastic deformation and residual stresses in rolling line contact, 19

Mechanical rolling pressure
contact region fatigue of railway wheels under combined mechanical rolling pressure and thermal brake loading, 57
Metal removal
effect of metal removal, steel cleanliness and wheel load on the fatigue life of rail, 71
Metallurgical improvement
metallurgical improvement of rail for the reduction of rail–wheel contact fatigue failures, 319

Optimization technique
optimization technique to minimize rail contact stresses, 373

Elsevier Sequoia/Printed in The Netherlands

Plastic deformation
effects of non-linear kinematic hardening on plastic deformation and residual stresses in rolling line contact, 19
Plastic flow
plastic flow and shakedown of the rail surface in repeated wheel–rail contact, 1

Rail contact stress
optimization technique to minimize rail contact stresses, 373
Rail corrugations
investigation of rail corrugations on the Baltimore Metro, 197
rail corrugations: analytical model and field tests, 163
Rail head profiles
design of rail head profile with full use of grinding, 363
Rail profiles
design methodology for wheel and rail profiles for use on steered railway vehicles, 329
Rail surface
plastic flow and shakedown of the rail surface in repeated wheel-rail contact, 1
Rail tread
formation of wear patterns on rail tread, 179
Residual stress
effects of non-linear kinematic hardening on plastic deformation and residual stresses in rolling line contact, 19
Resonance
wheelset–track resonance as a possible source of corrugation wear, 211
Rolling
early detection of rolling–sliding contact fatigue cracks, 103
Rolling conditions
effects of vibration system and rolling conditions on the development of corrugations, 227
Rolling contact
wheel–rail rolling contact theory, 243
Rolling contact fatigue
investigation of rolling contact fatigue in a head-hardened rail, 89
rolling contact fatigue in railway wheels under high axle loads, 139
shear mode crack growth and rolling contact fatigue, 307

Shakedown
plastic flow and shakedown of the rail surface in repeated wheel-rail contact, 1
Shear
shear mode crack growth and rolling contact fatigue, 307
Shelling
finite element and fatigue threshold study of shelling in heavy haul rails, 289
analysis of the thermal contributions to railway wheel shelling, 117
Sliding
the early detection of rolling–sliding contact fatigue cracks, 103
Steel cleanliness
effect of metal removal, steel cleanliness and wheel load on the fatigue life of rail, 71
Surface analysis
surface analysis of corrugated rail treads, 153
Thermal brake loading
contact region fatigue of railway wheels under combined mechanical rolling pressure and thermal brake loading, 57

Thermal contributions
analysis of the thermal contributions to railway wheel shelling, 117
Tribological studies
tribological studies on adhesion phenomena between wheel and rail at high speeds, 263

Vibration system
effects of vibration system and rolling conditions on the development of corrugations, 227

Wear patterns
formation of wear patterns on rail tread, 179
Wheel flats
factors of wheel flat occurrence and preventive measures, 277

Wheel load
effect of metal removal, steel cleanliness and wheel load on the fatigue life of rail, 71
Wheel profile wear
prediction of wheel profile wear, 343
Wheel profiles
design methodology for wheel and rail profiles for use on steered railway vehicles, 329
development of freight car wheel profiles — a case study, 353
